

Breaking News September 30th

By Ty & Charlene Bollinger

September 30, 2022

TTAV is experiencing heavy censorship on many social media channels since we've been targeted by the mainstream media sellouts, social media bullies, and political turncoats. Be sure to get the **TRUTH** by [subscribing to our email list](#). It's free.

Sometimes, there's so much news that it can be hard to keep up. Our goal is to bring you all the information you need to stay informed and keep your family healthy and safe. We spend hours on everything we publish to ensure accuracy so that you can get the full story. Below are a few important news stories from the past few days that we think are important. We'll follow up on these as more information becomes available.

In the meantime, here's what you need to know...

mRNA Present in Breast Milk of Vaccinated Women

A [new study](#) published on the JAMA network concludes that mRNA from COVID vaccines can be transmitted in small amounts through breast milk. The authors of the study examined 11 "lactating individuals," after getting either the Pfizer or Moderna mRNA shots.

According to the study's authors: "The initial messenger RNA (mRNA)

vaccine clinical trials excluded several vulnerable groups, including young children and lactating individuals.¹ The US Food and Drug Administration deferred the decision to authorize COVID-19 mRNA vaccines for infants younger than 6 months until more data are available because of the potential priming of the children's immune responses that may alter their immunity.² The Centers for Disease Control and Prevention recommends offering the COVID-19 mRNA vaccines to breastfeeding individuals,³ although the possible passage of vaccine mRNAs in breast milk resulting in infants' exposure at younger than 6 months was not investigated. This study investigated whether the COVID-19 vaccine mRNA can be detected in the expressed breast milk (EBM) of lactating individuals receiving the vaccination within 6 months after delivery."

Of the lactating women studied, nearly half were found to have mRNA from the COVID shots in their breast milk up to 45 hours after receiving the jab. We've discussed the risks of these shots at length. As it turns out, we may also be poisoning the most vulnerable among us – newborns.

Canada to Remove All COVID Travel Mandates

Canada will drop all COVID-19 restrictions for travelers from Oct. 1, including vaccination and masking requirements for flights and trains, the government said on Monday. Travelers, regardless of citizenship, will not have to submit health information through the ArriveCAN app or provide proof of vaccination from Saturday.

A requirement for travelers to wear masks on planes and trains would also be dropped. Cruise ship passengers and crew would also no longer be subject to vaccine requirements or COVID testing.

As of Oct. 1, all travelers, regardless of citizenship, will no longer have to:

- Submit public health information through the ArriveCAN app or website
- Provide proof of vaccination
- Undergo pre- or on-arrival testing
- Carry out COVID-19-related quarantine or isolation
- Monitor and report if they develop signs or symptoms of COVID-19 upon arriving to Canada
- Undergo health checks for travel on air and rail
- Wear masks on planes and trains

The move comes after MPs and border-city mayors published an open letter to Prime Minister Justin Trudeau and U.S. President Joe Biden last week asking them to end the “unnecessary” rules at the border, a move they say would allow border communities to recover economically from the pandemic.

Conservative Leader Pierre Poilievre says that the decision is a victory.

“After constant pressure from Conservatives [and] people across Canada, Trudeau Liberals finally back down on the disastrous ArriveCAN app, unscientific vaccine mandates and forced mask-wearing,” he [tweeted Monday](#).

“None of the science changes October 1 but because of you, Trudeau has to. Let’s keep it up.”

COVID Shots Officially More Dangerous Than COVID

A [recent study](#) coming from Oxford, Washington, Toronto, Harvard, and John Hopkins Universities, which looked at 18-29-year olds boosted with an mRNA vaccine. And what they found was this: "Using CDC and sponsor-reported adverse event data, we find that booster mandates may cause a net expected harm: per COVID-19 hospitalization prevented in previously uninfected young adults, we anticipate 18 to 98 serious adverse events, including 1.7 to 3.0 booster-associated myocarditis cases in males, and 1,373 to 3,234 cases of grade ≥ 3 reactogenicity which interferes with daily activities."

To put it another way: for those below 30 years old, vaccines are more harmful than COVID by a factor of 18-98%. The study continues:

"Given the high prevalence of post-infection immunity, this risk-benefit profile is even less favorable. University booster mandates are unethical because:

1 | No formal risk-benefit assessment exists for this age group

2 | Vaccine mandates may result in a net expected harm to individual young people

3 | Mandates are not proportionate: expected harms are not outweighed by public health benefits given the modest and transient effectiveness of vaccines against transmission

4 | US mandates violate the reciprocity principle because rare serious vaccine-related harms will not be reliably compensated due to gaps in current vaccine injury schemes

5 | Mandates create wider social harms. We consider counter-arguments such as a desire for socialization and safety and show

that such arguments lack scientific and/or ethical support."

Ya'll. Just follow the science.

Ty and Charlene have been on this mission together to reach as many people around the world with the truth that saves lives as they can, and ***they need your help!*** As you know, they are being censored with many other truth tellers. Please support their mission by ***sharing this article!*** Next, you can support them by going to www.thetruthaboutcancer.com and ***signing up*** for their FREE Newsletter!
