

Graphene Hydroxide

[Jaye B.](#)

(editor's note: It gets more evil with each passing day. Dr. Noack was most likely murdered just hours after publishing The Secrets of the Vaxx. You can see why below.)

R.I.P. Dr. Noack

Dr Noack: There's a professor at the University of Almeria, Professor Pablo Campra. He studied the vaxxines for the presence of graphene oxide using [Micro-Raman spectroscopy](#). It is the study of frequencies. There are frequency bands. Two of those bands are important. They show that it is not graphene oxide but rather graphene hydroxide.

I would like to explain what graphene hydroxide is. It's a mono-layer

activated carbon. There are C6 rings. They found it in all the samples. Every corner is a carbon sample. This is on a nanoscale. I'll cut this up a bit. If it is 50 nm long, then there are 500 rings in a row.

These are hydroxy (OH) groups. In graphene oxide, you have double-bonded oxygen and in graphene hydroxide, you have an OH group.

The electrons are delocalized (fully mobile).

The piece is 50 nm long but only 0.1 nm thick. These C6 structures are extremely stable. You can make make brake pads out of this. It is not biodegradable. These nanoscale structures can best be described as razor blades.

These razor blades are injected into the body. Nano scale razor blades, only one atom layer thick. Relatively wide and high, they are razors, not biodegradable.

The (OH) hydroxy groups can split off a proton. When the proton is split off, it gains a negative charge, spread out over the whole system. It is basically an acid. It suspends well in water because of the negative charge.

So these are razor blades spread homogeneously in the liquid. This is basically Russian Roulette.

You can see very clearly in this woman, it cuts the blood vessels. The blood vessels, have epithelial cells as their inner lining. The epithelium is extremely smooth, like a mirror and it is cut up by these razor blades. That is what's so dangerous. If you inject the vaccine into a vein, the razors will circulate in the blood and cut up the

epithelium.

The main thing is that toxicological tests are done in petri dishes and there, you will not find anything.

These are the sharpest imaginable objects because they are only one atom layer thick. This is a huge molecule which is extremely sharp.

I am an expert in activated carbon. In my doctoral thesis, I converted graphene oxide into graphene hydroxide. I joined the world's leading activated carbon manufacturer. After a year, I was in charge of new activated carbon products. We bought a small company near Newcastle, England. I was in charge of "new carbon products" Europe-wide.

I was in application scouting. If you perform an autopsy on the victims, you will not find anything. Toxicologists do their tests in petri dishes. They can't imagine that there are structures that can cut up blood vessels. There are pictures of coagulated blood coming out of the nose. People bleed to death internally, especially the top athletes who are dropping dead have fast-flowing blood. The faster the blood flow, the more damage the razors will do.

As a chemist, when you inject this into the blood, you know you are a murderer. It's a new material. Toxicologists aren't aware of it yet.

Suddenly, it makes sense that patients look like this and that top athletes with high blood circulation – completely healthy – suddenly drop dead.

You see people collapse immediately after vaccination and have a

seizure. These people had bad luck in Russian Roulette. Very likely, a vein was hit by the syringe.

The question you have to ask politicians and doctors, the question doctors should ask Pfizer is: Why are these razor blades in the vaxxine?

Now they want to force-vaxxinate children from the age of 5.

This guy is Dr Szekeres, President of the Austrian Medical Board.

(Plays video of Dr Szekeres)

News Anchor: In Vienna, it is already possible, with an "off-label" promotion to immunize the 5- to 11-year-olds.

Dr Noack: (Stops video and comments) Nice word, "immunize".

News Anchor: So we will have the vaxxine mandate but it's not clear which age limits apply. Which age limit would you suggest?

Dr Szekeres: I would declare a vaxxine mandate for everyone eligible for vaccination and cleared by a European authority. Currently, this means adolescents, 12 years and up. We expect that the vaccine mandate for children of 5 years and older will be greenlit by the European agencies in the next few days. As you correctly say, current vaccination is 'off-label'."

Dr Noack: (Stops video and comments)"Off-label" means the vaccination is not approved, yet they inject it already. You can only call this a death shot, at this point.

Dr Szekeres: After extensive consultation with a pediatrician, this is

—

Dr Noack: (Stops video and comments) A pediatrician? You think a pediatrician understand what graphene oxide is? There's another interview where he says he thinks it is "good" from a medical standpoint to vaccinate the population by force. An important concept in science is disputation – a scientific debate.

The basis of medicine or pharmaceuticals is chemistry. This doctor has no idea of chemistry. Completely new substances unknown to nature are brought in (with the vaccines). Everyone is talking about the messenger RNA, which has complex effects. The theory of mRNA is complex but every chemist understands what this (the graphene oxide) does.

You see the mRNA is possibly a diversion. I cannot imagine anyone will be able to give me, as a carbon specialist a proper explanation why these carbon razor blades are in the vaccine.

This is war.

They distract us with messenger RNA. But people cannot collapse that quickly from that right after the injection. Something else is going on and this effect should be studied.

He claims to be a specialist. Apparently, the Austrian doctors don't have a smarter guy than this one. He is a doctor that doesn't understand chemistry or he is a criminal or his is a mass-murderer.

After the Spanish doctor's study, it is official that nanoscale graphene (hydr)oxide is in the vaccine. So it is clear that razor blades are injected. So he is probably incompetent.

If you want to vaccinate a population by force, you have to do your homework extremely carefully. Because if there is something wrong with the injection, you will kill the whole population of a country.

You have to weigh the risk. How dangerous is corona? How dangerous is the injection?

This guy wonders whether people should be tied-up before being injected. And he's the top doctor!

Are the doctors in Austria so incompetent that they don't understand the basic chemistry medicine is based on? Then they should surrender their license!

Any doctor in Austria, who, after this information is now public and continues to inject this, is a murderer.

I am not some guy in the carbon field. I have a doctorate in this area. I worked for the world's biggest activated carbon manufacturer in the area of new carbon products. I'm pretty much the only European who visited other experts in Pittsburgh.

After this, I started my own activated carbon company. I resinated paper and turned it into activated carbon membranes. You could cut your hands with this charred paper. It was extremely sharp. I have a good idea what this graphene hydroxide does.

This is Russian Roulette. Do you hit the vein or not? Does it stay in the muscle? Then it is less toxic. But if you hit a vein and the batches contain different amounts of GHO, then you have to know you are cutting people up from the inside.

And it is a highly intelligent poison, because a normal toxicologist who works with petri dishes cannot find it because it doesn't move.

Toxicologists just don't expect any nanoscale razors but I can say as a chemist that we are absolutely certain that the graphene hydroxide is in there. These are nanoscale razor blades. Now they want to inject children with these nano-sized razors.

I want Dr Szekeles to explain what these razor blades are doing in these injections. And he needs to explain this to his boss, mr Schallenberg (Austrian chancellor), too. He is probably also a consultant for the Austrian prime minister, Mr Schallenberg.

Mr Schallenberg, who is a lawyer, is responsible for choosing the right consultants. If he imposes this vaxxine on all Austrians, he HAS to select the right consultants. He's a lawyer, he doesn't know medicine but his job is to select competent consultants and he is responsible if he selects incompetent consultants.

As a chemist, I vouch for the fact that these are nanoscale razor blades. You can make brake pads from carbon structures, which last forever. This material has zero biodegradability. It stays in the body forever. Even if people don't drop dead immediately, it cuts up the little blood vessels little but little.

It destroys the heart. All the heart attacks, all the strokes. As a doctor, you have to ask yourself, where is this coming from?

If you understand that nano razor blades are being injected, it is clear why all the cardiovascular diseases appear. The heart is cut up, the brain is cut up. Blood vessels are cut up. These graphene structures (aka monolayer carbon or monolayer graphite) are so

stable. Every chemist knows this. They are not degradable. The structure is 50 nm long and 0.1 nm thick. Of course it is a razor. Every chemist knows it is.

The epithelial cells are extremely smooth for a good reason but become rough when cut up and things stick to it. By now, any idiot can inject this and when they hit a vein. To me, this is Russian Roulette.

Here's a petri dish. A normal toxicologist tests using a petri dish. This material is declared an "experimental vaccine" for a reason. They don't know what will happen.

Every vaccinated subject has to sign that they take full responsibility. It will take Pfizer 50 years until the contacts with Pfizer will be published. What is in these contracts? Why 50 years?

In Germany or Austria, there is nobody with my expertise. The leading German carbon specialist, Dr Harmut von Kienle was my mentor for one year. I wrote my thesis in this field. I started my business in this field and won a business plan competition in Wolfsburg. I won 75,000 Deutsch Marks (€87,500) in the competition. I received venture capital to the tune of 6 million Deutsch Marks (€3 million). I had ten developers to develop all these new carbon products. I know what I'm talking about.

Any chemist in the chat is invited to refute me or give another opinion. You are all invited to tell me I'm wrong.

Sir Karl Popper explained the fundamentals of science: Hypothesis, Refutation. Popper said it was better to kill theories than to kill humans. The whole population is supposed to be injected. Exactly

like Popper says, if you continue to ride this murderous theory, you have to be extremely careful.

They are the first to impose a vaxxine mandate. They are killing the whole Austrian nation. Mr Schallenberg is responsible for this. He needs the right consultants. We had an Austrian once who brought suffering and death over Europe. I am appealing to you to share this video on all channels.

Mr Schallenberg needs thousands or hundreds of thousands of letters. He must know this is a razor, this is a means to kill. And if he knows this and he continues, he is a mass-murderer. He will walk in Hitler's footsteps.

This has to come out now! I am ready to talk to anybody about this material. As a chemist, I say these are razor blades and I notice how little doctors know about chemistry. But they are doing chemistry in the body. In small children, in pregnant women.

And now you doctors know what you are doing and if you continue to inject, you are murderers.

Go out, type this out, give it to your doctor, give it to your politicians. And if you continue, I promise you, no court in the world will save you.

What you are doing is mass murder. Austria has the responsibility. They started the vaxxine mandate.

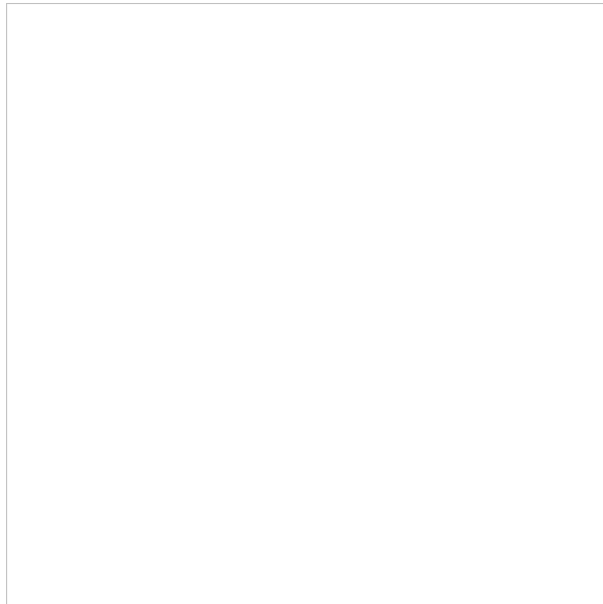

And you, Mr Schallenberg, you need the best consultants. And if you are not able to select the best consultants, you are incompetent and need to resign. Same with the health minister. How competent are

you?

You are ready to inject the whole Austrian population with razor blades that are not biodegradable?

Share the video, write it down, put it on a USB stick and send it to politicians and doctors. Make it clear to them: If they continue to do this, they are murderers.
